OBJECTIVES

I am a PHP developer with 3 years of experience. My long-term goal is to become a back-end web developer and eventually progress to a Technical Lead position. Currently, I aim to continuously enhance my technical skills and expand my knowledge by working in the company's professional environment. I believe that through these efforts and the experience I have gained, I will contribute to the company's growth and excel in every task assigned to me.

WORK EXPERIENCE

MYSPA JOINT STOCK COMPANY

04/2023 - 02/2025

Back-end developer (PHP/Laravel, CodeIgniter)

Project: E-commerce (Beautyx), Management software (Myspa)

Position: Back-end developer

Team Size: 7 members (3 Back-end, 2 Front-end, 2 Mobile)

Tech: PHP, Laravel, CodeIgniter, MySQL, MongoDB

System Integration & Payment Gateways:

- Integrated payment gateways for product purchases: Momo, ViettelPay, VNPay, Mpos, Tingbox.
- Integrated Meinvoice electronic invoicing system.
- Integrated call and SMS service providers: Omicall, Caresoft, Esms.
- Implemented user login and registration via Zalo, Facebook, Gmail accounts.

Notifications:

- Integrated Zalo ZNS messaging and handled Zalo socket return events.
- Send notifications via Firebase, Email, Slack.
- Configured Laravel Notifications to support multiple channels.

Automation & Scheduling:

- Scheduled tasks using crontab to handle appointment reminders, birthday, Zalo OA token updates,...
- Utilized Laravel Scheduling to automate periodic tasks.

Real-time Communication & Search:

- Built live chat system using WebSocket for real-time communication.
- Implemented advanced search functionality using Elasticsearch.

Authentication & Authorization:

- Developed secure authentication features using Laravel Sanctum: login, register, token refresh, password reset,...
- Cache permission feature of user with: Redis, memcached..
- Designed relational database schemas based on business requirements.
- Logged system actions using executable SQL files for audit and traceability.
- Designed and developed scalable RESTful APIs for both web and mobile platforms.

Back-end developer (PHP/Laravel / CodeIgniter)**Team Size: 3 members (2 Back-end, 1 Front-end)****Tech: PHP, Laravel, CodeIgniter, MySQL****Full-stack Web Development:**

- Developed cloud-based eCommerce extensions to enhance business operations.
- Built and structured various web projects with a focus on scalability, maintainability, and performance.
- Created robust RESTful APIs to support frontend and third-party integrations.
- Designed and implemented required functionalities based on client or team lead specifications.

UI/UX & Front-end Development:

- Designed user interfaces based on available templates from PSD, Figma, ThemeForest, and other sources.
- Translated design assets into responsive, user-friendly front-end implementations.

Deployment & Server Management:

- Deployed back-end applications to production servers, handled domain configurations, and performed post-deployment testing.
- Set up and managed server environments, focusing on performance tuning, security hardening, and uptime monitoring.

FREELANCE

04/2023 - 10/2023

Full-stack Developer (PHP/Laravel/ CodeIgniter)**Project: E-commerce (duocminhduong.com / innhatquang.vn / hdtruyen.com)****Position: Full-stack developer****Team Size: 1 members****Tech: PHP, Laravel, MySQL**

- Integrated payment gateways Momo and VNPay.
